I enjoy my satelliete radio since my job requires travel. The choices always keep me entertained. Having the traffic reports on cities well in advance allows me to plan my trip. I can avoid the problem areas and there is one less vehicle to get caught in the traffic. Why wait until it is too late to avoid traffic problems and cause more of a back up. Not only should this service be kept but it should be expanded. With all the push to reduce traffic at key bottlenecks, why not promote a way to reduce the problem instead of getting rid of a solution. Keep satellite radio in its current form and even find a way to help expand a great public service!!!
